

Be confident in your digital risk posture.

Getting your arms around your enterprise digital risk exposures—including cyber risk—can be daunting.

Tactical point-solution tools can only give you bits and pieces, presenting a challenge in easily communicating your risk posture to motivate and inform your board and other executive leadership.

With Emergent Instinct, you get simple and fast visibility of your enterprise digital risk exposures and their potential business impacts. See what could happen in your enterprise tomorrow, who is creating the risk, and how much it could hurt your business.

The Instinct Engine samples your existing enterprise data sources to project your exposure to thousands of real-world and simulated loss scenarios. You are able to justify and focus your cybersecurity program by showing your executives which parts of the business are exceeding the corporate risk appetite.

Assure your executives that the business isn't taking on more risk than they have approved and shift accountability to the lines of business that introduce exposures that exceed their risk appetite.

Be confident knowing that your risk posture is in line with your executive cyber risk appetite.

Emergent's Instinct Engine™

Provide business-relevant risk clarity to your leadership

Easy to install, with no change in current technology deployment

Continuously learns from your data to find risks you didn't know were there

Get “left of boom.” Report on tomorrow’s incidents *before* they happen, and motivate the business to do something about them.

The only scenario-driven platform built to communicate digital risk

As digital risk gains board-level scrutiny, and responsibility for cyber risk management becomes a second-line function, you need to change your risk conversation and reporting. Performance metrics and compliance scores do not sufficiently convey business risks.

Our digital risk platform is built on real-world and machine-generated digital loss scenarios. It helps you communicate in terms your business leaders understand—reputation, credit, or market losses—supported by objective, real-time data.

Help your business understand the consequences of their digital risk taking.

Light-Touch Installation and Data Integration

Instead of generating or correlating massive amounts of data, we use simple queries to existing tactical technologies—like antivirus, directory services, or threat feeds, plus data our risk analysts have curated—to answer the simple questions “should this make us nervous?” and “how does this expose us?”

Installation can be done in as little as five days. We include a catalog of 50 data connectors, but it only takes two or three to show value.

Ask us about our 30 Day “Proof of Value.”

Dynamic risk model to discover new risks in your enterprise

Once the Instinct Engine™ is installed and configured with your unique Risk Appetite, it immediately looks to see what could happen next in your environment and projects how much it could cost you.

Swarming artificial intelligence conducts simulations across your risk exposures to visualize future incident impact against your corporate risk repository.

The Instinct Engine™ generates new scenarios to ask “*what else could happen?*” so you don’t get surprised by something you weren’t watching.
